LAND ROVER GAMEVIEWER

The two new game viewing vehicles, designed and developed by **TFM** Projects for Land Rover South Africa. This product offers the ultimate in comfort, reliability, safety and security.

Thanks to the high strength structural steel and lightweight aluminium, the vehicle remains as true to the philosophy as any other Defender product and that is to work hard in a hostile environment. Extensive market research has been undertaken to ensure that the vehicle offers a comprehensive specification and includes many standard features that are expensive options on other products. Creature comforts include deep stowage pockets in the seat backs, cup holders, overhead stowage for coats and blankets (130 only), power sockets for video cameras and even interior light to aid passengers in getting in and out of the vehicle at night. Fold down steps (130) and fixed steps (110) provide easy access for young and old alike.

The elevating seating platform provides a commanding viewing position for flora and fauna and gives a sense of security for passengers. The vehicle can be registered and used on public roads, as the South African Bureau of Standards has homologated it. Parts and service can be carried out through any authorized Land Rover dealer. The vehicles can carry 10 (130) and 7 (110) passengers respectively in comfort over rugged and harsh terrain, while Land Rover's unique weather protection system also enables the vehicle to be used on the open road and in rainy situations. None of Land Rover's legendary off road capabilities have been lost with this product. It is able to climb slopes that would make most people giddy and with its massive suspension travel obstacles are negotiated with ease. Heavy duty chassis, suspension and tyres give the vehicle unsurpassed durability and reliability, which has been proven by extensive development and testing.
